DEMONSTRATE NETWORK FORENSICS USING A PCAP XRAYTOOL

AIM:

To perform network forensics by analysing a packet capture (PCAP) file using PCAP X-Ray tool to identify network protocols, suspicious communication patterns, transferred files.

PROCEDURE:

Step 1: Capture your own traffic by obtain a PCAP file

Step 2: Open the PCAP X-Ray Tool

Step 3: Upload PCAP File

Step 4: View dashboard after processing,

Step 5: Analyze protocol distribution

Step 6: Examine source and destination hosts.

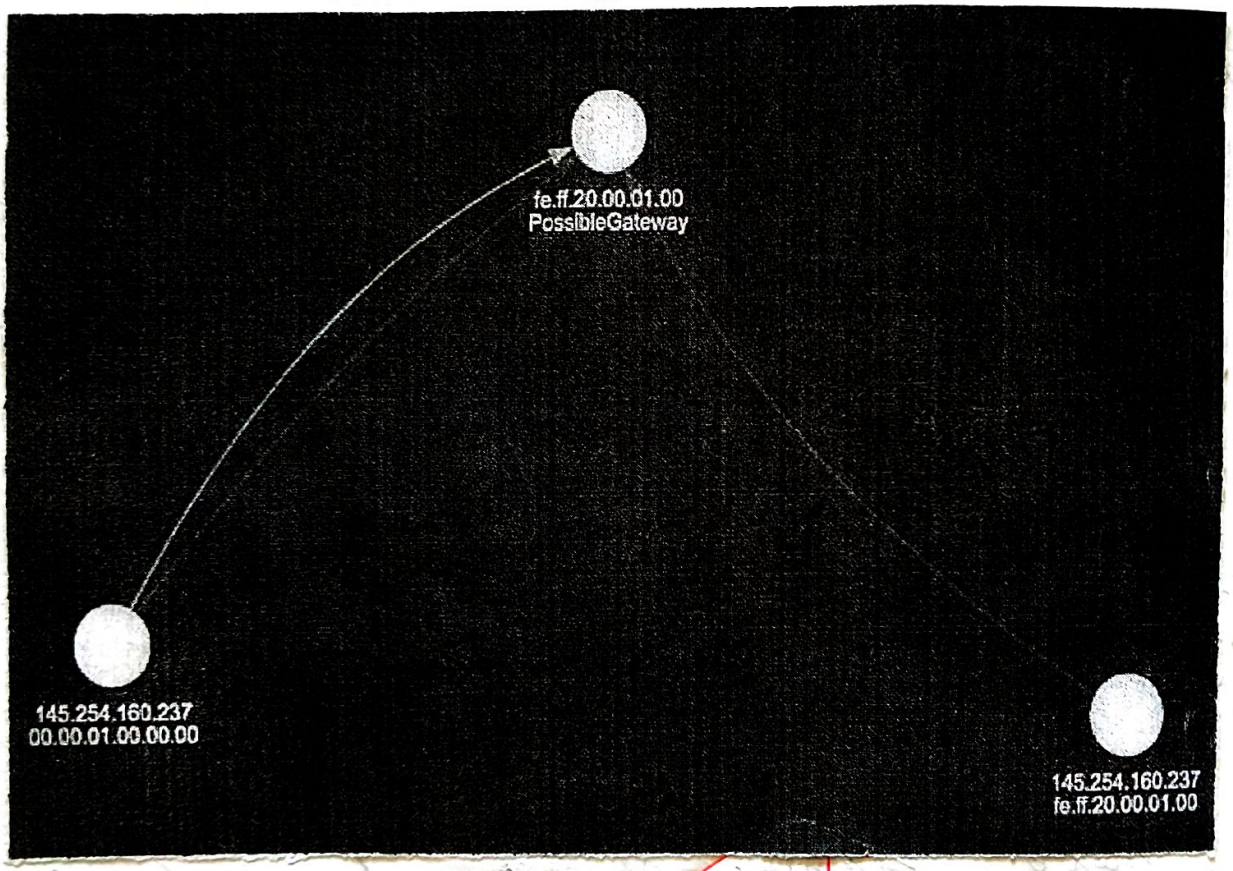

Step 7: Analyze DNS queries.

Step 8: Inspect HTTP Requests.

Step 9: Review TLS/HTTPS sessions.

Step 10: Inspect conversation

Step 11: Check for credentials

fe.ff.20.00.01.00

step 12 : Extract Files

step 13 : Identify security Indicators

step 14 : View Timeline

step 15 : Generate the report

RESULT :

Implemented network forensics by analysing packet capture file using PCAP & X-Ray tool to identify network protocols
